CATALOG

introduction

We are a company dedicated to providing stair noses manufacturing services using our patented-process.

We use your material floor to make our pieces, so there is never variation in color or brightness, as we work with the current material that you are installing our pieces always retain the click to connect with other planks.

floatingsteps

vinyl floor application

vinyl flooring application

squaremodel

Our **squaremodel** profile is an option for a classic look and give the feeling that each step is a solid wood plank, this option combines perfectly with our White Riser, or with the same color of wood.

Vinyl Flooring Application. **PATENTED**

Female Click

2

Inside

In the Vinyl Floor Application we don't Cut or Score the material.

decomodel

Our **decomodel** profile is the right profile when looking to achieve a minimalist and modern look, its design allows you to turn each of your steps into a single piece, this profile works very well with light colors and brown tones.

Vinyl Flooring Application. **PATENTED**

male Click

2.25

In the **decomodel** you have to fill the stair overhang.

In the Vinyl Floor Application we don't Cut or Score the material

floatingsteps

In many cases the stairs are floating steps, we manufacture these pieces to wrap each step and achieve a modern finish.

Vinyl Flooring Application. **PATENTED**

In the Vinyl Floor Application we don't Cut or Score the material

To Make a floating stair you must contact to you local stairnose supplier for custom stairnose piece .

Thanks to a number of advances over the years VINYL flooring is water-and stain-resistant, versatile, and provides good durability for the cost.

floatingsteps

In many cases the stairs are floating steps, we manufacture these pieces to wrap each step and achieve a modern finish.

Engineering Wood Application.

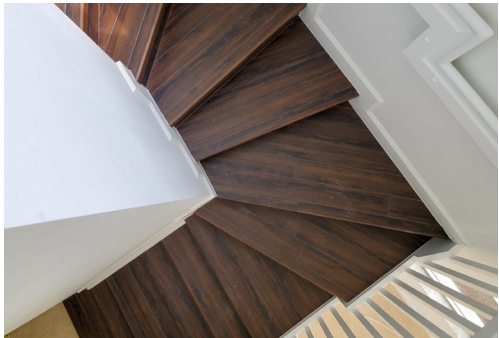

In the Engineering Wood Application we Cut the material to make the stairnose.

To Make a floating stair you must contact to you local stairnose supplier for custom stairnose piece .

Engineered wood is a more complex product that consists of several layers. The core layers make the product more stable than regular hardwood, while the outer veneer surface adds beauty and authenticity.

2. mouldings

mouldings

endcap 

Provides a right-angle shaped piece designed to end a floor by covering the top and side of its edge with a matching trim.

The moulding can made only in SPC Flooring.

T-moulding 

Vinyl Flooring Application.

Used as a transition piece from one flooring to another of equal height or to gain expansion spaces.

The moulding can made only in SPC Flooring.

threshold 

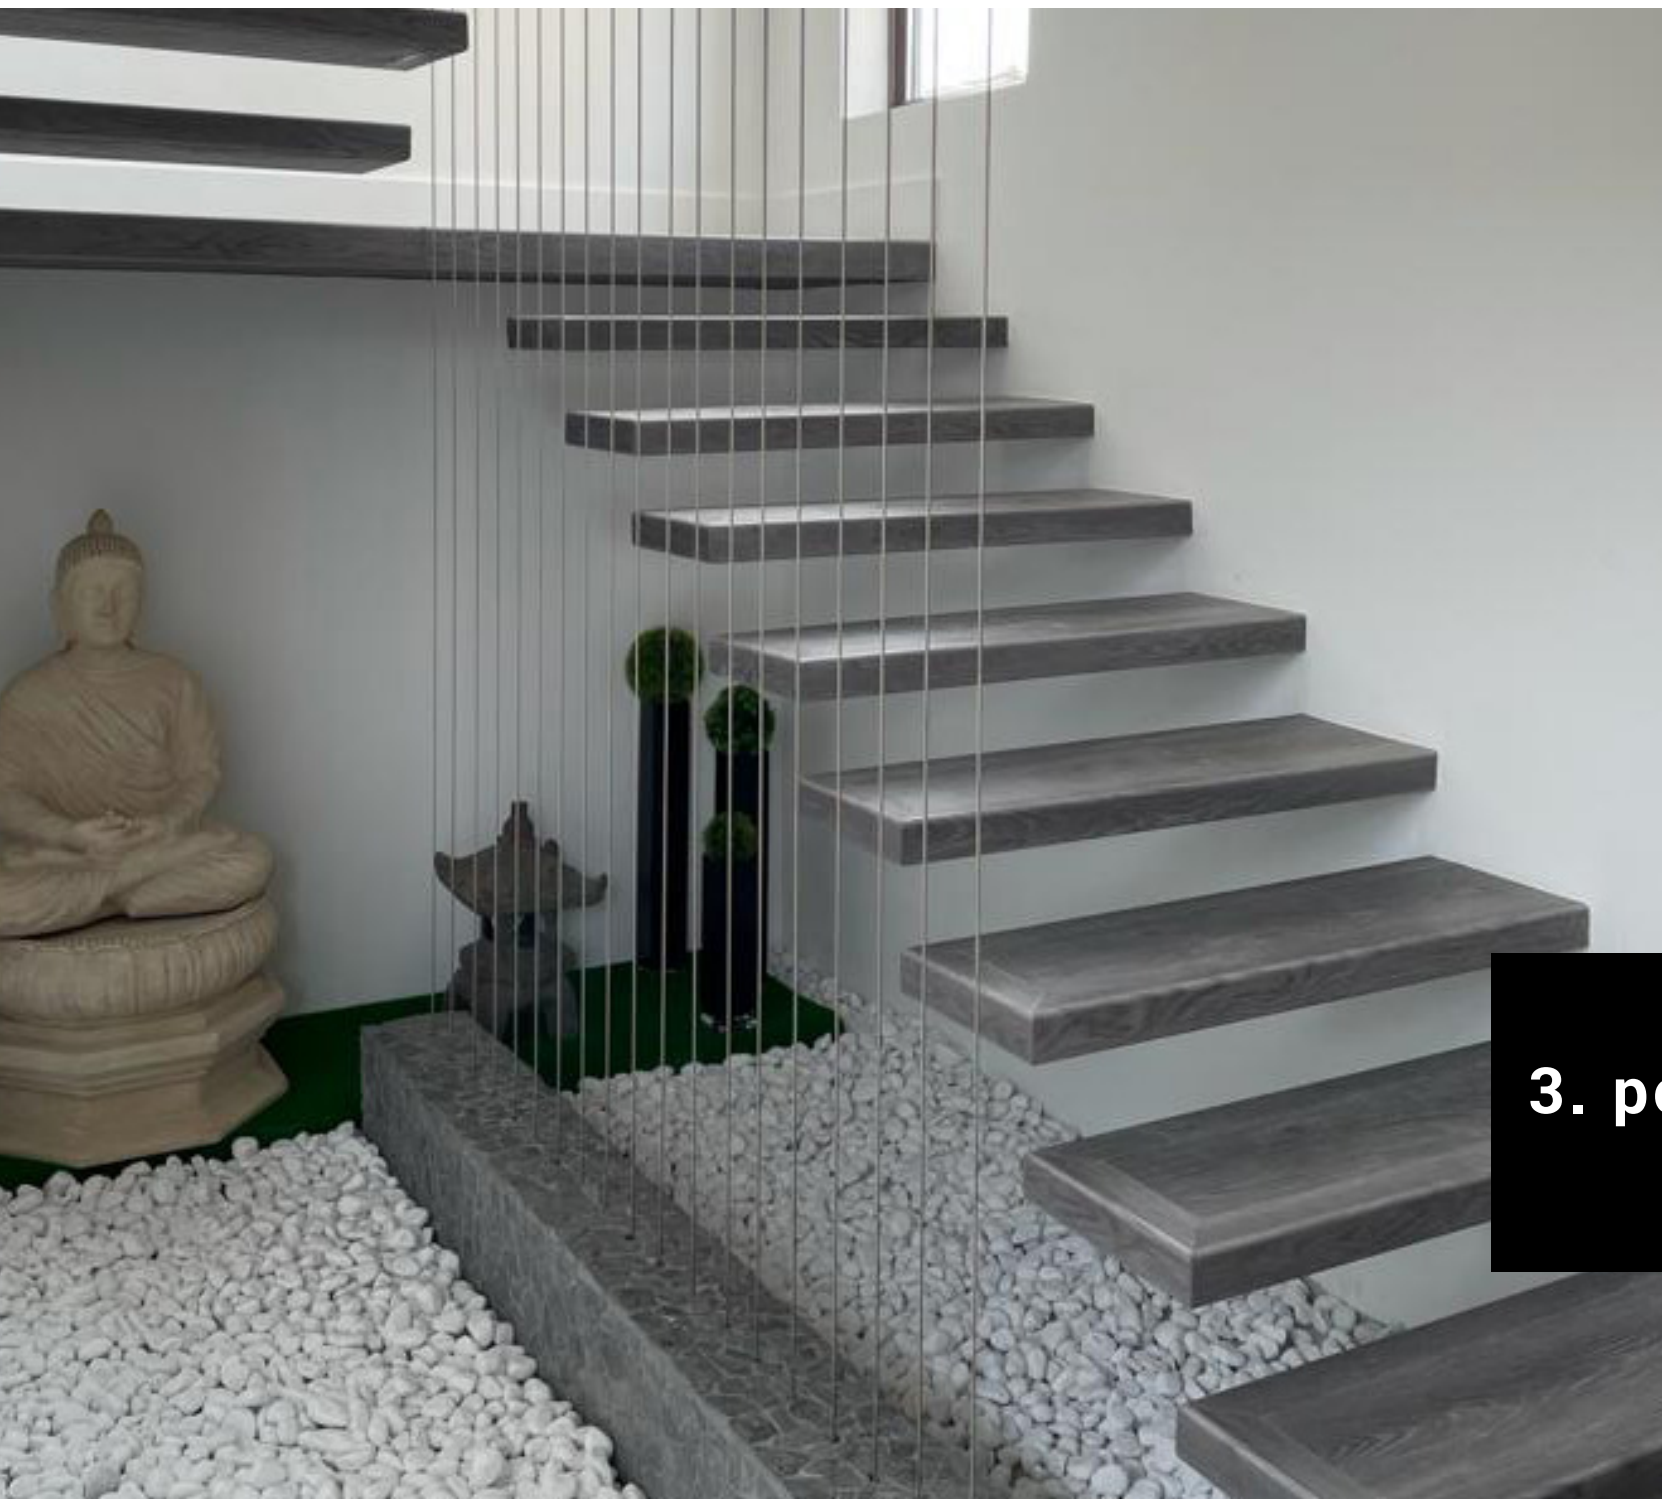

Vinyl Flooring Application.

It is used to provide a smooth and safe transition between flooring surfaces of unequal heights.

The moulding can made only in SPC Flooring.

Mouldings give the floor a finished look. and the transitions conceal the cut edges and gaps necessary for expansion and contraction.
